DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 2-4 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 2 recites the limitation "the drive member" in line 1. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Burnside et al. '281 further in view of Chen et al. '249. Burnside et al. disclose a device for clamping and ablating cardiac tissue comprising a first handle member (400), a second handle member (402), first and second mating jaw members (382, 384), the jaw members a first and second elongate electrode (294; col, 45 lines 61-68).

Burnside et al. teach all of the limitations of the claims except at least one of the jaw members being biased by a spring so as to urge the jaw members toward a clamped position. Chen et al. disclose an electrosurgical device that includes jaw members biased in a clamped position by a spring (col. 15 lines 45-49). Biasing the jaws in the clamped position facilitates maneuvering the instrument through the body since in such position the cross-sectional profile is the smallest. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to provide a spring on the jaw members of Burnside et al. to facilitate maneuvering the instrument through the body.
